

KO Pot

Sizes 2" through 12"

Flanged with 125# bolt pattern

Aluminum

(other materials available upon request)

Hydraulically water tested to 5 psi

Allows inspection of sediment accumulation while in operation

2" sediment wash out port

Bolted top easily removes for cleaning

2" NPT level monitor/alarm Port with Optional controls

Optional Condensate Drip Trap

(automatic or manual)

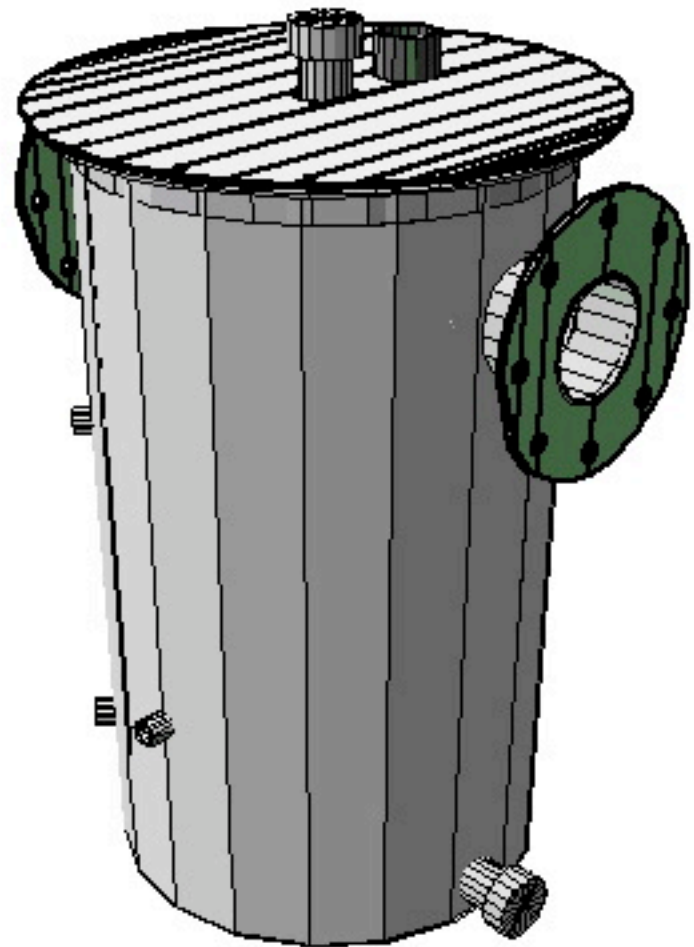

Optional Site Glass for condensate monitoring

Dimensions:

2, 3, 4, 6"
Face to face 27"
Height 34"
Diameter 20"

8, 10, 12"
Face to face 38"
Height 36"
Diameter 30"

Sediment and Liquid Knock Out Pot

These Knock Out Pots are for low pressure gas lines to remove sediment and/or condensate from a wet gas. This design uses a cyclone effect with a combination of swirling, a velocity drop and a change of direction for the effective removal of most of the liquids and solids in a gas stream.
